

# The BCS Cowditiion App

Bayer creates innovative solutions for farmers across the world to help better manage herd health. **Costly disease treatment, loss of milk production and decreased fertility are three issues facing all dairy farmers today.**

The BCS Cowditiion app makes it easier to manage a complete herd's performance by giving dairy professionals a risk assessment of various diseases, so they can take appropriate action. **The app is already used by over 40,000 dairy professionals in over 90 countries.**

The BCS Cowditiion app has been updated and now includes **data enabling tailored and specialized solutions for better herd health management** through its cooperation with Dairy Data Warehouse. In addition, the app now allows users to **import existing data from herd management systems.**

Bayer BCS Cowditiion is available free-for-download from the AppStore and GooglePlay in 14 languages.
